beyond basics
X.O
by promodoro

At promodoro we're always looking for something new, something innovative, so we're always researching and looking to be on the cutting edge of our space. After months of painstaking product development, our latest fabric has arrived: **The T-Shirt made from millennial cotton jersey and the new molton Sweatshirt made from millennial mixed fabric.** Because this fabric is so special, we've decided to give the collection a new brand name: X.O by promodoro.

We've taken all our fabric development knowhow accumulated over several decades to create the ultimate cotton fabric. Its plated appearance, drapiness, elasticity and structure will surely make it the most unique imprintable product on the market.

The X.O. collection carries fresh colors and tailored sophisticated cuts in many different styles to suit every occasion and every lifestyle. Modern cuts, ultra quality and vibrant colors are just some of the ingredients of a brand that doesn't need a label.

It's not just the yarn:

MILLENNIAL

it is the cotton jersey

We've been for over 30 years, and during that time we've managed to accumulate a lot of know-how; not just about fabrics, but also about our customers' needs and aspirations.

The story starts with a fine yarn spun of rich fibers, combined with a unique knitting process and attention to detail during every step of the way that ultimately gives you our latest innovation.

The dying process Promodoro developed enhances the fabric appearance, breathability and functionality. The plated structure also makes this fabric ideal for all forms of DTG and traditional printing.

After all, we are here only to build your loyalty and our partnership.

Certificates

Every product at promodoro is made from certified materials and manufactured at certified production facilities. OEKO-TEX, WRAP and ISO standards are among the many that we abide by, but we go beyond; we wrote our own principles on code of conduct, moral and ethical principles, and we run our own Corporate Social Responsibility initiatives.

The OEKO-TEX® criteria catalogue offers manufacturers in the textiles industry a scientific basis of uniform standards for the evaluation of possible harmful substances in textiles. This label provides an indication of the verified safety of skin-friendly clothing for consumers, for example.

The ISO 9001 standard defines the bases for a quality management system. It includes a specific focus on the customers, the motivation and involvement of the management staff, all processes and continual improvement on all levels.

WRAP is an independent and objective non-profit organisation that has set itself the goal of improving the working conditions in factories in the clothing industry. The WRAP standards include the prohibition of forced or child labour, prohibition of harassment or abuse, payment of the legal minimum wage including social benefits, and guaranteeing of a safe and healthy workplace.

The ISO 14001 standard sets the framework for an environmental management system. While no concrete requirements are stipulated for environmental performance, the standard provides companies and organisations with a framework within which effective environmental management can be established.

Global Organic Textile Standard (GOTS) sets out guidelines for the manufacturers of textiles made from organic fibres. These guidelines cover the entire supply chain - both environmental aspects and the working conditions in the textiles and clothing industry. The fertility of soil may not be manipulated by harmful substances, persistent pesticides or artificial fertiliser, for example. Likewise, the cultivation of genetically-modified crops is prohibited.

The OHSAS 18001 (Occupational Health and Safety Assessment Series) is an internationally-recognised method to test and assess work protection systems. A defined management system is used here to identify and control health and safety risks. This allows companies to minimise hazards for their employees and visitors.

think green initiative

The Think Green Initiative (TGI) supports suppliers in the implementation of environmental protection measures in the manufacturing process. At the same time, it helps to reduce costs and enhance material efficiency. The requirements of employees, investors and the community are also taken into account.

The Customs-Trade Partnership Against Terrorism (C-TPAT) strives to protect the global supply chain from terrorism.
